

NetAnalysis v3.5.23152.6

2024-12-31 16:13:50

NetAnalysis provides the most sophisticated forensic tool for analyzing, extracting, and presenting evidence.

The most up-to-date application provides the most advanced level of browser support and the most robust tools that help the forensic examiner analyze the collected information. When you purchase NetAnalysis, it also comes with an HstEx license. HstEx.

HstEx is part of NetAnalysis and is a sophisticated technology for forensic data recovery designed to retrieve the deleted history of browsers and cache information from a range of sources of forensic evidence files in addition to physical and digital devices. Specifically designed to work with combination and NetAnalysis (and is offered in the NetAnalysis suite), The powerful software can retrieve deleted data from various Internet browsers, regardless of whether they're used in Windows or Linux, macOS, Android, or iOS devices.

NetAnalysisGreat Features:

NetAnalysis was developed explicitly for web browser forensics and supported all major web browsers, both mobile and desktop. It can analyze cache, history, cookies, and other data sources. It also has robust reporting capabilities that allow you to create evidence that relates to the user's activity in a short time. The program also includes powerful analytical tools that assist you in decoding and understanding the information. NetAnalysis can be used with browsers installed in Windows, Linux, macOS, Android, iOS, and standalone, portable versions.

Searching, filtering, and identifying things of interest or worth is simple using NetAnalysis(r). It comes with a variety of powerful filtering and searching options and an intuitive filter builder tool to enable you to build and save powerful queries. It also lets you search using keywords and use the keyword lists and ready-made filters we provide. In order to speed up the identification of evidence, we've created a powerful, fully-featured Text search for NetAnalysis(r) Version 2.

The website page that rebuilds the engine of NetAnalysis(r) version 2 is completely revamped. It's now significantly quicker and more powerful than the previous version. We've created an offline HTML5-compliant player capable of showing cached web pages, images, videos, and other media. It also plays audio files. NetAnalysis(r) now extracts web page previews as well as thumbnails.

The NetAnalysis(r) Reporting Suite v2 provides data analysis, reporting, and visualization. It provides all the tools that the report designer needs to build nearly any kind of report, including the hierarchical master-detail report, record and multi-column reports, as well as interactive drill-down or drill-through reports.

The report manager offers the option of saving the report template in an archive file and then re-using it as and as often as needed.
