Debugging and Error Handling in ASP.NET Core - Chris Behrens

2025-04-01 20:40:03

Debugging and Error Handling in ASP.NET Core - Chris Behrens is a comprehensive course designed to equip developers with essential skills for troubleshooting and fortifying ASP.NET Core applications. Led by expert instructor Chris Behrens, the course covers various topics crucial for mastering the art of debugging and error handling.

The course begins by delving into the fundamentals of debugging, providing insights into the tools and techniques available for identifying and resolving issues within ASP.NET Core applications. Participants learn how to leverage server-side ASP.NET debugging tools effectively, ensuring efficient problem resolution in their projects. Additionally, client-side debugging techniques are explored, enabling developers to tackle issues across various aspects of their applications.

Moreover, offers in-depth guidance on crafting robust error-handling mechanisms within the ASP.NET framework. Participants gain valuable insights into structuring code to gracefully manage unexpected scenarios, enhancing the reliability and maintainability of their applications. Advanced debugging and error handling scenarios are also addressed, empowering developers to navigate complex issues confidently, ultimately enabling them to develop resilient code that withstands real-world deployment challenges.

Debugging and Error Handling in ASP.NET Core - Chris Behrens Table of contents:

1. Course Overview (1 minute)
2. Understanding What Debugging Is (20 minutes)
3. Using Server-side ASP.NET Debugging Tools (23 minutes)
4. Using Client-side ASP.NET Debugging Tools (30 minutes)
5. Understanding Error Handling with ASP.NET (35 minutes)
6. Working with Advanced Scenarios in Debugging and Error Handling (21 minutes)
