Entrian Inline Watch v1.0.15 (08 Nov 2021)

2024-12-18 23:01:31

Since you debug, Entrian Inline Watch Shows the values of Factors inline on your source code, updated live as you step through your code:

It is possible to see the live values directly now in origin instead of hovering over them using the mouse or even locating them from the Watch windows.

Whenever you land in a purpose or at a breakpoint, you can observe the worth of your function parameters and parameters.

It is not only for primitive values such as strings and numbers - you control how your structures and classes are exhibited, eg.

You can also configure how accessor works are exhibited to call to an accessor function, for example.

所有软件资源 100%安全 已检测 无病毒 无篡改
