AttackFlow Extension Edition for Visual Studio v2.1.2 (30 Apr 2019)

2024-12-27 16:51:04

Attackflow supplies an interactive method of programming. Ensures developing safe code into the right location.

Attackflow Extensions are IDE extensions that are installed in the market of Visual Studio and Eclipse. They guarantee real-time protected coding for development teams.

Static investigation as you sort with no disturbance and outcomes comprise injection vulnerabilities. We, programmers, are utilized to get educated about syntactic difficulties, pre-compilation warnings, and errors exactly if we communicate without even compiling the code. This considerably speeds the development procedure. Security static source code analysis should encourage the same behavior, telling us about safety issues we will generate.

AttackFlow Extension Edition for Visual Studio Great Features:

- In-place discovering explanations increasing safety falsification awareness complementing security training.
- It fits right together with the Ability of DevOps teams to interrupt the procedure notifying the programmer's code.
- The findings include actionable mitigation and code snippets.
- Being a Visual Studio extension, it's not difficult to set up AttackFlow; also, it functions seamlessly in the ideal location with real-time and dynamic alarms.
- Plethora of Findings
  AttackFlow looks for countless findings, including exceptionally popular and critical security flaws.
- Powerful Scan Engine
  A state-of-the-art standard scan engine with injection, control flow, quality assurance evaluation.
- Constructed to Visual Studio
  Being a Visual Studio extension, easy-to-install AttackFlow runs seamlessly with set up alarms.
- Actionable
  The findings include actionable mitigation products, references, and code snippets in addition to fixing price and prioritization indicators.
- Absolutely free of Compilation
  No requirement for full compilation as a requirement for scanning investigation. Becoming free of syntax mistakes is sufficient for conducting analysis.
- Fueling Safety DevOps
  It fits right together with the Ability of DevOps teams to interrupt the procedure telling as the programmer's code.
