AdminSystem EASendMail SMTP Component v7.9.0.3 for ActiveX & .NET & .NET Core & UWP & UAP

2026-09-30 18:17:42

EASendMail SMTP is basically a component which permits the user and developer in order to provide their reliability which is required as well as the performance email program from the alternatives as well as the JavaScript .Net, VB6, ASP, C# and a few more to be mentioned. The programming languages are very ready here and a lot of features that are advanced in nature are supported as well for example the record lookup in order to send an email that has no server SMTP at all. In this case the Active X as well as the addition of the .NET EASendMail unit is provided to the users and programmers. The version of the Active X but basically constructed by the native C+ which had the ability to be utilized in the Delphi, the Native American C++, ASP, software. The variant of the .NET has the ability to be created by the C# with the use of the manage code and it has the ability to be used in the frame of the .NET along with the software.

In the EASendMail. NET/. NET Core Class the EASendMail namespace include a very pure courser that permits the user and developer in order to create as well as send email messages from the VB.NET, ASP.NET, C# as well as they are there managed applications that are present. The email messages can be send through random email support of SMTP or even DNS that has no server of SMTP.

EASendMail ActiveX Object contains items that permit the user on developer in order to create as well as send email messages to some other compatible software easily and flexibly. The email messages can be sent from the random email support of SMTP as well as DNS.
