FireMonkey App Low Code Wizard v1.0 (19 Sep 2021) for D11 Alexandria Retial

2024-12-18 23:02:00

You can create a fully functional Delphi mobile app with multiple screens by using the Low Code Wizard.

Low-code app development is becoming more popular than ever. This is due to the high demand for software and the difficulties of creating it. Delphi was a leader in low-code development. RAD is a method of building software by connecting components using a visual designer. It is high code. Low code that cannot be extended to an app with a traditional coded interface has a hard upper limit on functionality. This is the key to many low-code solutions. As a technology advisor, you don't want to suggest anything that will restrict your client or company. Low code development solutions are the best because they allow you to expand and grow. Delphi excels in this area.

FireMonkey App Low Code Wizard Great Features:

- User accounts: sign up, sign in, and a profile screen with hooks for your own authentication.
- Settings screen (where you can change the app theme (light or dark), plus some example settings you can reuse or extend)
- Contacts screen
- Terms of Use, About, and Privacy policy screens, easily configurable for your own data
- A database layer: using Interbase, store data in your app
- An example new screen you can use as a template or example for adding new functionality
