The screenshot displays the SnapGene 3.2.1 software interface. The main window shows a circular plasmid map for 'pIB2-SEC13-mEGFP.dna*' (7235 bp) with various restriction enzyme sites and features like 'AmpR', 'ori', and 'AOX1 terminator'. Overlaid on the interface are three dialog boxes:

- About SnapGene:** Displays the SnapGene logo, version 3.2.1, and lists the developers: Andrei Galka, Eugene Losev, Michael Scott, Joe Broms, Renik Ziemlinski, and Melissa Stokes.
- SnapGene Registration:** A registration window with fields for 'Group Name' (DownLoadLy.R), 'Registration Code', and 'License Type' (Developer). It includes options to register or unregister the computer.
- SnapGene 3.2.1 Activation Crack:** A small window with the name 'DownLoadLy.R', a 'Keep Back up' checkbox, and a 'Patch And Register' button. A message at the bottom states 'Patch and Activation successful!!! Enjoy'.

 The bottom status bar shows 'Unique 6+ Cutters (Nonredundant)' and various toolbars for Map, Sequence, Enzymes, Features, Primers, and History.
