Mixing Your Acrylic Colours With Ease: Mixing colors is a skill in and of itself, and I created this course to increase your understanding so that you can confidently apply colors in your work.

There are four enjoyable project ideas to discover the colors you like and develop your ability to see colors.

Learn:

- How do you make your color an effective tool to understand the color theory?
- The secret to mixing your natural colors is to blend them; they are great for landscapes, wildlife, or portraits.
- How to mix colors that are difficult and stay clear of "muddy" results by detecting colors' temperature and undertones
- Develop your eye for color using exercises that are color-matched

It is ideal for those new to color and those looking to take on the challenge. After the course, you'll be able to comprehend the concept of color, your resources, and the ability to focus on color. It can help you utilize colors with confidence.

Materials required:

- Paints - I'll use acrylics in this class. However, the lessons apply to any painting medium. You can customize the courses to meet your needs if you prefer oils, watercolor, or gouache. I would encourage you to explore the colors available at home to ensure that you don't have the same colors to be able to participate. You'll need blue, red, yellow, and white at a minimum.
- Paintbrush
- A lot of clean water as well as cloth to ensure your brush is sparkling
- sketchbook or paper

It also includes the Color worksheets and Color worksheets (which you can download from the Resources as well as the Resources section)

I love color mixes. There are many possibilities, and I'm excited to show you the possibilities.
