### Autodesk - Fabrication CAMduct:

Autodesk Fabrication CAMduct v2026 is adept software for MEP subcontractors that automates the working processes of BIM and CAD design. Users can estimate, detail, and fabricate mechanical building systems (LOD 400) with tailoring functionalities under this product suite, which comprises Fabrication ESTmep™, CADmep™, and CAMduct™.

The software improves the accuracy of the estimates and models by using manufacturers' contents as predefined templates and streamlined processes for installation and production are guaranteed. Processes of MEP contractors become optimal through the use of this powerful toolset.

## Some great features of Autodesk - Fabrication CAMduct:

- **Extensives Component Library:** Access a propitiatory characterized parametric component library tailored for advanced detailing of sheet metal.
- **Material Specific Nesting:** Set nesting parameters for insulation and ductboard, and sheet metal separately to lessen multiple nesting jobs.
- **Barcode and QR Code:** Enrich identification of tagged documents through advanced barcodes and QR codes for ease of tracking.
- **User-friendly Interface:** Users with no prior software training, as well as experienced ones, can intuitively work on the GUI, lessening the complexity of job data capture and editing.
- **Advanced Costing Tools:** Assessers can estimate projects on more complex factors without altering other flexibility capturing windows through advanced project costing tools provided.
- **NC Writing and Machine Support:** Machine flexible control across the scales of any production line adopting the built in post processors for various machines.
