

DBi Tech Schedule Controls for .Net & WPF & Silverlight & COM

2024-12-18 23:02:15

Solutions Program for Silverlight has been extensive management for handling and presenting business data in Gantt mode presentations, for preparation and monitoring multiple resources inside the Microsoft .NET Silverlight 5 Framework. It empowers programmers to create completely operational Resource Gantt, Planning, and Scheduling options in minutes utilizing Microsoft Visual Studio 2010 (and afterward).

Solutions Program for Silverlight's optimized design and architecture make this controller ideally suited to the toughest applications, managing tens of thousands of tasks, resources, limitations, and bookings. Solutions Program for Silverlight is intended for every single business where valuable tools, such as people, machines, and raw materials, have to be educated and planned.

DbiScheduleSL helps programmers build the ideal front ends for background computer and Rich Internet Applications (RIA) in crucial regions of resource optimization and management, manufacturing scheduling, and preparation such as logistics scheduling and preparation.

Fully Integrated with Visual Studio .NET: Programmers can work in their favorite languages such as XAML, VB .NET, and C#.

Integrated XML Information Provider: Silverlight introduces its own distinct set of information management demands - Solutions Program for Silverlight provides an integrated data special assembly simplifying the procedure and making it simpler for programmers to handle data from any given source.

Solutions Program for Silverlight ships using an extra meeting - dbiScheduelSLDB, which offers performance to last the dbiScheduleSL controller and its own objects to XML; In either detached storage or into a local directory.
