What is Character Animator Animation?

Adobe Character Animator is a software application that allows you to animate characters in real-time. It integrates with other Adobe Creative Cloud applications and uses your webcam and microphone to capture your facial expressions and voice, which are then applied to a digital character. The result is a dynamic and interactive character animation.

Character Animator is often used for creating animated characters for live streaming, educational videos, explainer videos, and more. It's a powerful tool for creating engaging and interactive character animations without the need for traditional frame-by-frame animation.
