# Make Mockups Quickly With Smart Objects: Mockup Academy Class 3

2025-02-10 17:10:43　　label 我要反馈　　下载页面

**Make Mockups Quickly With Smart Objects:**

**What is a Smart Object?**

It's a particular Photoshop layer that allows you to manipulate images without damaging them. Furthermore, it allows users to make multi-use mockups quickly! After you've put together your mockup, you can easily add new images at any time, and it'll become a fantastic mockup. If you decide to use templates available online instead of making your own, you'll have to be conscious of intelligent objects, as they're included in most templates.

**Class Description:**

This class is easy to comprehend intelligent objects and provides all the essential details needed to set them. The class is 3. Mockup Academy, and while I recommend starting with Class 1, it's not mandatory. This is straightforward instruction on putting the file on your computer; you shouldn't have difficulty understanding the lesson. (Note that if you've taken introductory Mockup Academy classes, you can skip this one.) Mockup Academy is designed for graphic designers with surface patterns and entrepreneurs, designers, and other professionals who are familiar with Photoshop and want to learn specific methods for creating realistic-looking mockups of products.

**Background:**

I've been a surface pattern designer for six or more years and have licensed my designs to various companies. I created this course because it took me a while to make mockups, and I would have loved to have found a program similar to this when I began my journey! I'll share all my secrets, from how to arrange your layers to achieve the best results and make use of intelligent layers with masks to tips for defining objects and utilizing transformation tools.

**Lessons in This Class:**

- 1. Introduction
- 2. Making Mockups - The Basic Concept
- 3. Quick Explanation of Smart Objects
- 4. Creating Smart Objects
- 5. Smart Object + Warp Tool
- 6. Some Final Details
- 7. Your Project and Upcoming Classes
