Luxand Mirror Reality SDK v1.0 (13 Nov 2018) for Win & Android & iOS Retail

2026-09-09 11:34:29

The mirror reality of the SDK is described to be a very high performance library for The Objective C, Java as well as the C++ developers in order to create the augmented reality app which are based on the real-time face transforms. The library is basically available for the iOS, Android, and even the Windows Form. With the help and use of the mirror reality SDK the user has the ability to create apps that are capable of turning that users face into an animated Avatar of the choice. The display of the picture becomes alive magic mirror along with the user app which is applying the real-time animated special effect to the face of the user. The user has the ability to create apps that are capable of turning the user's reflection into a zombie or even a Santa Claus which makes them look like a celebrity of the choice of the user. The user has the ability to also age in order to appear younger or older and also apply a festive and animal masks. The mirror reality SDK has the ability to provide the users with a number of readymade masks but the user has the ability to easily add his own. The imagination of the user is the only limit present. The mirror reality for the desktop is basically and Innovative Entertainment app which is based on the Luxand's development in real time and has the ability to recognize the faces as well as morphing. It is described to be a high heeled Library for the Java as well as the programmers of C++ the library has the ability to be obtained in different platforms. It is exactly the opposite way and the mirror reality has the ability to display the normal aging as well as opposed to the edging with the help of the product that the user sells. The user has the ability to adjust the mirror reality in a different way by making it a perfect match for the retailers as well as the entertainment industry along with the advertising and the agencies of the PR. The quality of the type of the Aging has the ability to be changed and the user has the capability to specified the exact amount of the aging which is required.

Luxand Mirror Reality SDK Great Features:

It has the following features on attributes that are stated as below such as:

- The technology is basically based on the recognition of some 70 facial features which are opposed the process of using just a few of them. This permits the user and developer for great feet even for the most complex masks that are available.
- The user has the ability to create his own mask and the best advantages that there are samples available.
- Same code has the ability to be compiled into a working app or each and every platform which is supported.
- It has the ability to provide easy integration and it has the ability to publish only a handful of the functions for the process of loading the masks and later applying the effects based on the choice of the user.
- The sample code is capable of implementing iOS as well as the screenshot of the Android. In the iOS the video clips are capable of being captured.
