

Enhance your web applications with **TX Text Control .NET Server for ASP.NET**, which provides powerful document processing capabilities. Seamless integrate features like a comprehensive document editor that mimics MS Word, ensuring pixel-perfect rendering and user-friendly experience across all modern browsers. You can also include lightweight document viewing, annotation, and form-filling functionalities that work on any device, enabling any collaboration and electronic signatures. The server-side component offers for programmatically creating, merging, converting, and modifying documents, supporting formats such as PDF and Office Open XML.

¹robust SDKs make it easy for developers to integrate these features into ASP.NET Core, Angular, React, and other web frameworks. It supports the latest .NET versions and offers extensive reporting and mail merge capabilities, allowing you to generate detailed and dynamic reports using MS Word-compatible templates. Additionally, it simplifies the creation and processing of PDF documents, including electronic invoices and digitally signed PDFs, all stored securely on your servers.

Key Features of TX Text Control .NET Server for ASP.NET :

1. Comprehensive document editor with MS Word compatibility
2. Lightweight document viewer with annotation and form-filling
3. Server-side document creation, merging, and modification
4. Supports various document formats (PDF, Office Open XML, RTF)
5. Reporting and mail merge capabilities
6. Electronic signatures and secure document storage
7. Compatible with ASP.NET Core, Angular, React, and more
8. Supports .NET 5, 6, 7, and .NET 4.8
