Stimulsoft Reports v2025.3.5 for WPF (.Net 4.5.2 to 8.0)

2026-04-08 08:02:20

Stimulsoft Reports for WPF is a fully developed WPF-based reporting tool. It allows you to create, display, print, and export detailed professional reports of any level of complexity with the help of your software. It is powerful and easy to work with using reports because it has a fast report engine, an intuitive designer, and a customizable viewer.

The report viewer is built to be fast and convenient. It already facilitates interactive features such as drill-downs, parameters, and resource-saving documents, and provides the choice of various themes and appearances to ensure that it integrates well into your application. The report designer is also very simple to integrate - only a few lines of code will do. It provides the end users with a Ribbon-based interface, wizards, 30+ languages and even a built in AI toolkit to check script, validate data, and accelerate report generation.

Relational work and access to data are flexible and strong. Pull data can be sourced almost everywhere-databases, cloud repositories, or files such as Excel, CSV, JSON, and XML. After preparing the report, you may preview, print, export to other formats, or publish online. **Stimulsoft Reports for WPF** is also compatible with reports generated in other Stimulsoft products as part of the Stimulsoft ecosystem and can import reports written in other reporting systems.

Key Features of **Stimulsoft Reports for WPF**:

1. **Report Viewer** – A fast, customizable component for displaying reports with support for themes, parameters, drill-downs, and interactive options.
2. **Report Designer** – A user-friendly, Ribbon-style designer that allows end users to create and edit reports. It's royalty-free for runtime use.
3. **AI Assistance** – Integrated Stimul AI helps verify SQL connections, scripts, and expressions, and can convert Blockly scripts into code.
4. **Step-by-Step Report Creation** – Connect data, add tables/charts/maps, customize styles, preview instantly, and then export or share reports.
5. **Data Connectivity** – Supports a wide range of sources including MS SQL, MySQL, PostgreSQL, Oracle, MongoDB, Azure, Google Analytics, Excel, CSV, JSON, and XML.
6. **Integration with WPF** – Easy to embed into applications with just a few lines of code, with full support for C#/VB.NET APIs, properties, and events.
7. **Cross-Platform Compatibility** – Reports work across the Stimulsoft ecosystem, including desktop and cloud, and can even be imported from other reporting systems.
