Exiland Backup Professional v7.1 Multilingual

2026-01-09 11:21:39

Make backups of your important files frequently and ensure the security of your files. Use Exiland Backup to safeguard against significant data loss due to computer viruses, PC malfunctions, unwanted changes, HDD crashes, and many other threats. If you lose data, restore them using a backup.

Exiland Backup Professional is among the applications specifically designed to ensure the integrity of your data by providing the ability to back up all of your essential data from the drive, whether network or locally.

If you're a new user or haven't tried any backup software, then don't be concerned because, with the help of the wizard built into the program and aid document, you will be able to learn how to use the software.

You can choose the type of backup you want: sequential, differential, or synched. Four ways of backing up your data allow you to choose the most efficient recovery method most suitable for your needs.

Additionally, you can execute tasks manually by hitting the "Run" or the "Run" button or schedule them to run daily, weekly, or even monthly. In addition, you can begin backing up your data upon boot-up after shutting down your PC, from a remote computer via the FTP protocol, or when you've connected to a removable drive.

To effectively protect your data, it is advised to back up your important data at least every working day to another computer than your own. This is the most secure method to protect your data if your system fails, is infected, or fails to respond to your instructions.

After a backup job is accomplished, a log file is generated, which can be exported to text documents and sent to an email address in an attached file. If the reports consume a significant amount of space, they can compress the report into ZIP files.

In conclusion, Exiland Backup Professional is a valuable and reliable software program that provides an easy backup and restore data. Apart from offering a full array of features, it is also quick to save files and can run using the smallest amount of memory and CPU.

Exiland Backup Professional Great Features:

- full
- differential
- incremental
- file synchronization (update backup)

Backs up files automatically on a schedule, on PC start, connecting a USB device, from the Windows command line (.bat), or manually clicking the "Run" button.

Fast compression in standard ZIP, 7-Zip formats, with AES-256 encryption, with the optional splitting of extensive ZIP archives into multiple volumes, and password protection.

- Local / network drives
  - removable USB disks
- external SSD, HDD
- SSH/FTP servers (UNIX)
- NAS servers

- detailed log
- indicator in Notification Area
- notifications by email

所有软件资源 100%安全 已检测 无病毒 无篡改
