Embarcadero RAD Studio XE2 Update 4 Hotfix1 v16.0.4504.48759

2024-12-18 23:02:00

With the help of the Embarcadero RAD Studio, the user can write applications once in the Delphi server and later compile the same for the Mac, Windows as well as the applications of the iOS. The C++Builder can be easily compiled for Windows and Mac. The applications of the RAD Studio XE2 are now very easy to deploy and distribute. With the help of the RAD Studio XE2, the data can be connected to any VCL or the FireMonkey graphic or interface element.

Embarcadero RAD Studio XE2 Amazing Attributes:

Deliver rich applications to Windows, Mac, and cellular: RAD Studio XE2 uses the new features of the FireMonkey application in the platform and allows the user to compile the nativity to the Mac and the Windows. The use of the Delphi in the RAD Studio XE2 can make the program seven-run for iOS. The software may take the entire advantage of the speed it has and the power of the GPU along with the CPU.

Create visually stunning and interactive software: This feature instantly builds the FireMonkey software which is a magnificent visual, highly interactive, and some data-rich for the PCs, Macs, and the devices that are cellular. This can also deliver the user costly business programs that can engage the customers with an immense and more intriguing as well as interactive encounter of programs.

Bring a brand new design to your VCL software: RAD Studio XE2 presents the users with the VCL Design which is mainly for the Delphi along with the C++ Builder and It permits the users to employ a very personalize look and the feel of the VCL software here. Styles are being applied to the components of the UI, and are very easy to have new looked parts in it. They can be picked from the fashions that are contained as well as utilized with the VCL Style Designer and can be made or personalized by the user itself.

Construct 64-bit Windows software: Today it is very easy and possible to create a 64bit Windows software with the help of Delphi and to use the recent hardwires and have access to the memory more. Can also push the envelope of the functionality in it. Now, all the technology of Windows is 64bit and it is empowered and included in FireMonkey, VCL, RTL, and the Delphi compiler. The streamlining of the migration of the current available VCL software which is 64 bit.

Place your logic and data from the cloud: RAD Studio XE2 comprises enlarged calculation shadows that are integrated with the new information as well as the installation choices. Delphi and the C++ Builder APIs service storage and the accessibility of them to the blobs, queues of the messages, and the tables that are available on the Windows Azure along with the Amazon Simple Queue Services, the straightforward DB, and the simple service storage. The user can utilize the development manager which is the new set-up service software of Amazon EC2 as well in the Microsoft Windows Azure.

Connect anyplace: RAD Studio XE2 provides its users a brand new option for connectivity and has support for the InterBase XE, Firebird 2.5, SQL Anywhere, and the ODBC that provides the user with more database options and allows the user to build mobile eclipse and the development application of the visual studio here.

Work faster and smarter with an enlarged developer toolbox: Embarcadero RAD Studio XE2 contains the updated and the new tools of the integration that allow and help the user in getting the project done in a faster manner. RAD Studio XE2, at present, includes the FastReport for the designing along with the creation of the reports.

Incorporate new functionality into your applications: The RadPHP comprises over 35 brand new Zend Framework elements that permit the user to incorporate some unique attributes on the software that the user uses already in a much simple, component-based manner. The utilization of the components for the purpose of receiving and sending the emails on the application can be easier and faster. Use the server REST, JSON and the RSS can be possible here. The operation with google based data such as YouTube, photographs, Google Apps, and many more.
