SpreadsheetConverter v10.6.8300 Final

2026-04-08 08:14:44

SpreadsheetConverter enables you to turn even your ordinary, everyday Excel spreadsheets into impressive and dynamically interactive web pages and even mobile apps. Rather than having to hire developers to code something custom, you can take the spreadsheets you already work in and convert them, in a flash, into calculators, forms, and more that look and work incredible on the web. Regardless of the loan calculators or even catering order forms, anything is possible.

By using its smart add-in for Excel, you can create strong data entry forms with totals, charts, and a slider, and even share the same online. Users have the opportunity to fill out forms, communicate with calculators, and even send data to their email or a cloud database. It is exactly like Excel, but it works on desktops, tablets, and phones.

Better still, **SpreadsheetConverter** makes your work easily accessible and forward-looking. It is compatible with the newer versions of the Excel application, and it has live previews, supports the integration of Google Analytics, and has responsive layouts that suit any screen. You do not need to be a developer - an ordinary person can create modern web applications as long as they can use Excel.

Key Features of **SpreadsheetConverter** :

1. **Convert Excel to Web Pages & Apps** – Instantly publish any spreadsheet as a working web calculator or form.
2. **Smart Web Forms** – Build interactive forms with formulas, totals, and dropdowns, then receive submissions by email or cloud storage.
3. **Interactive Charts & Widgets** – Add sliders, charts, and visual elements that update live when users change values.
4. **Responsive Design** – Your spreadsheet layout automatically adapts to desktops, tablets, and smartphones — no need for separate mobile versions.
5. **Live Preview** – See how your spreadsheet will look as a web page while you're still designing in Excel.
6. **Excel 2021 & Office 365 Support** – Full compatibility with the newest Excel functions (like XLOOKUP, SUMIFS, COUNTIFS) for dynamic calculations.
7. **Cloud Hosting** – Publish your apps on Amazon S3 for fast, reliable, and scalable performance.
8. **Mobile Optimization** – Export dedicated versions for iPhone and Android to take full advantage of touch screens.
9. **Google Analytics 4 Integration** – Track user activity and improve your calculators with real usage insights.
10. **Easy to Use** – No coding required. If you're comfortable with Excel, you can build professional calculators and forms.
