- Faizal Westcott – Analog Pack 1.0 (XMP, DNG):

The pack contains five Adobe Lightroom presets. These are designed to work with Fujifilm raw files and the Classic Chrome profile. However, they can also be used with photos from other brands. These presets are for Lightroom Classic CC (2019 - present), Lightroom CC (2019 - present), and Lightroom Mobile (use DNG file included in folder).

This preset pack was inspired by various film stocks I have shot with in the past. Although they are not exact replicas of these stock films, they have some of the same characteristics.

How to install on macOS or Windows

1. Get the ZIP file
2. Extract files
3. Open Lightroom, and then go to the Presets window under the Develop Module.
4. Click on the + symbol
5. Click import presets
6. Locate the location of the unzipped preset files, and then select
7. Now you are all set! You should see the presets in the Preset window.

Notification Sometimes, presets may not appear in all preset windows. You can fix this by going to your presets settings page. Make sure that you're showing "partially compatible presets".

How to use

These presets are meant to be a starting point in your editing process. These presets are not to be applied directly to your image. After applying presets, here are some adjustments that you should make.

1. Adjust the exposure of your image. Each preset defaults with +2 exposure. Reduce this until your image has the right exposure!
2. Whitebalance settings
3. Highlights
4. If necessary, reduce saturation
5. You can fine-tune certain colors in the HSL module to suit your needs

Package Includes:

- BLUE-MOON
- BUTTER-PECAN
- COOKIES-N-CREAM
- MINT
- VANILLA

These presets can be installed on Windows and mobile.
