2026-07-04 20:11:45

is a top-tier visual ORM designer catering to .NET ORM Frameworks, delivering robust code generation functionalities. With support for Entity Framework, EF Core, NHibernate, LinqConnect, Telerik Data Access, and LINQ to SQL, it streamlines ORM model design and accelerates database application development. Its intuitive drag-and-drop interface enables developers to design the data access layer visually, reducing development time and minimizing errors through automated code generation from databases or vice versa.

Backed by Devart's 15 years of expertise in .NET data access solutions, **Devart Entity Developer Professional** offers a professional-grade environment crafted by experienced developers. It integrates seamlessly with Visual Studio, supports both Model-First and Database-First approaches, and provides comprehensive mapping capabilities for various ORM frameworks. With features like powerful model refactoring, optimized handling of large models, and design-time query execution, it enhances developer productivity and efficiency.

**Devart Entity Developer Professional** boasts extensive customization options, including support for T4 template-based code generation, customizable templates, and automation capabilities through console applications. Its feature-rich interface ensures high-quality generated code and facilitates efficient ORM model design and code generation processes. **Devart Entity Developer Professional** is an indispensable tool for developers seeking to streamline ORM model design and accelerate database application development in the .NET ecosystem.
