Bytescout Screen Capturing SDK ActiveX v2.62.1054

2024-12-29 12:25:16

If you build an application meant to record screen actions to WMV, AVI movie files, then utilize Bytescout Screen Capturing SDK to add display video recording functionality to your program quickly. This display recording SDK enables you to produce high-quality desktop records, including sound, mouse clicks, and moves.

This display recorder SDK simplifies creating screen recording applications in almost any programming language. It includes Visual Basic 6, Visual Basic .NET, Visual C# .NET sample source codes and can be used with almost any programming language that supports ActiveX. Mono .NET Length was harmonious. Boost your applications with display video recording functionality utilizing the effective toolkit.

Makes display cast recording (WMV, AVI) as simple as 5 lines of code on your VB, C#, or C++ program. Provides mouse cursor hot spot, sound recording, record from the whole screen, selected window, area, place around the mouse.

Bytescout Screen Capturing SDK ActiveX Great Features:

- Adds monitor video capture performance to your program with a few lines of code with ActiveX/COM item!
- Royalty-free supply Together with your own product/application (Developer License is required);
- It contains 3 ports that Permit You to capture screen video with ActiveX driven display recorder, DirectShow Filter, or Virtual Camera to supply both large and low-level elements;
- Provides DirectShow Source Filter, interface for advanced audio software developers;
- Works offline with no Internet connection needed;
- Supports video formats: WMV, AVI, lossless AVI (with the added Bytescout Lossless Video Codec);
- Allows capturing a Variety of areas of a desktop computer:
  - Record whole desktop computer -- a fantastic alternative for employee monitoring, parental control software, etc...
  - Capture chosen rectangle area of a display -- the most flexible alternative That's usually inserted to any display recording applications;
  - Grab dynamic area across a mouse cursor -- convenient solution for consumer support, creating interactive presentations, etc.;
  - Listing predefined window or program -- the very best solution for producing tutorials and applications simulations.
- Whilst recording mouse movements, it provides a hot-spot to highlight the cursor and animates mouse clicks to make cursor and clicks readily recognizable in output ;
- Captures audio from any available source Together with screen recording;
- Pause and Resume works accessible for both WMV and AVI output formats;
- Custom title for your filter or catch object can be obtained (see licensing alternatives);
- API to blackout selected areas containing sensitive client information on the movie in run-time;
- Royalty-free licensing: no Extra run-time permits or run-time charges;
- New version upgrades: text overlay supports time and date macros while employed with a webcam, sound recording is enabled by default, handling of lost sound hardware mistakes, profile sample additional, Java source code sample included, .net source code samples upgraded and Windows Media Video 9 Screen codec source code samples included.
