Applications   Tools

The use of the XML validator and the buddy software package as a starting point to inspect, check, transform, and edit the user XML and the data of JSON. The XML validator can provide a lot of eunuch functionalities to the user and developer as an XML validator and editor. A permissive user and developer in order to check and date huge XML instances as well as files, but it doesn't permit them to load completely into the memory. There is an easy way to use the batch validator of the XML by the user and developer as well as a convenient find invalid XML feature. Nevada teachers of Schematron can support the schema of the JSON along with the syntax coloring and the auto-completion process for the user and developer. It is considered to be a unique explorer window with the help of XML, which is related to the process of enhancement. enables the user and developer in order to work with their technology of XML and JSON in a very convenient and efficient manner. Transformation of the XML and JSON to the format of HTML directly or applying the transformation of XSL to a lot of multiple files at a single go on the user disk.   Assigning the XML schema to the user data in order to run the built-in validators along with the single click. The use of them can be done in order to check any number of documents as well as a comprehensive error report alert.

JSONBuddy Desktop can supply the user and developer with a lot of JSON-related performance for the users every day as they work with the files of the JSON. The application can comprise an improved file explorer as well as an editor, a long way to the big file viewer in order to provide the user and developer with easy access to all the files of the JSON. With the use of the **JSONBuddy Desktop** the user can edit, validate, and change a multiple document of JSON with a couple of mouse clicks. Each performance is considered to be effortless to use the user without a deeper understanding of the JSON which can edit and confirm any range of files for the user and developer with ease.

Key Features of **JSONBuddy Desktop** :

1. It can provide the users with the XML editor, which is all the user requires to edit and create the data of XML.
2. The XML validator is present for the user, which helps in the building of the validator as well as the schema of the W3C

and DTD, along with large files of XML.

3. The editor of JSON, as well as its validator, is considered a unique grid-style editor for the standard-compliant JSON as well as the schema validator of it.
4. The validation of the batch is present for the user to use the validator engine in order to check thousands of XML as well as documents of JSON.
5. Schematron can check the user Schematron as well as the rules easily and flexibly.
6. The digital signature of the XML permits the user and developer to sign and verify the XML signature and support the SHA 2.
7. Finally, the editor for the large files permits the user and developer to edit and validate the multi-data of GB XML.
8. JSON editor along with the drag-and-drop process in order to create any structure of JSON in a fast and easy way.
9. The editor can support the collapse, expand sections, and process JSON data with a single mouse click.
10. The creation of the content of JSON in less time with the help of the intelligent context along with the sensitive and tree helper shows the properties from the assigned schema of JSON.
