In the initial conversation we had, it was clear the fact that Brit and myself wanted to make the Moon Pack be as exciting as the go-anywhere photographer from around the globe that we had in our minds. Since we both like shooting warm and seeking the golden rays It was crucial for us to ensure that no matter the location or landscape, these presets could allow you to make a clear edit or create images with film-inspired warmth without losing green and blue undertones. Through the use of features from the most recent version of *Lightroom, we created presets that can be adapted to cool and warm shooting styles. We also created customized Creative Profiles which allow you to add less or as the amount of warmth you want.

Moon Pack consists of 8 colors presets as well as 4 BW presets, and two custom Creative Profiles (please check the * below to determine compatibility). Each color preset comes with one with a higher contrast which is great for images with the sun. Each BW preset includes an option for a warming Creative Profile option.

The images below show how each preset affects an image using the same exposure and white balance.

- These presets work with any version of Lightroom 4 and above, however, to make use of the Creative Profiles, you'll require at least one of these applications: Lightroom Classic CC (version 7.5 or later), Lightroom CC (version 1.3 or later) and Adobe Camera Raw (version 10.3 or later).
- Note that these presets were created to work with RAW images and is suggested to apply them using the customized Creative Profile. To achieve the best results, make sure to upgrade your editing software to meet the requirements.
- This is Desktop Presets(not mobile Presets).
