Devart LinqConnect Professional v5.3.0 (18 Dec 2025)

2026-01-12 15:03:29

is a robust ORM solution tailored for .NET developers seeking seamless data access across various platforms. Compatible with LINQ to SQL, it offers a familiar interface for developers transitioning from LINQ to SQL, minimizing the learning curve. However, LinqConnect surpasses its predecessor with active development and support, extended compatibility with multiple database servers, and enhanced performance.

Offering flexibility in development approaches, **Devart LinqConnect Professional** supports Code-First, Database-First, and Model-First methodologies. Its visual model designer, Entity Developer, streamlines model design with intuitive wizards for database-model synchronization. The tool facilitates customizable code generation, enabling efficient code reuse across .NET frameworks, including Full .NET Framework, .NET Core, Silverlight, Mono, and more.

Devart LinqConnect Professional stands out for its robust LINQ support without extra layers between LINQ and SQL, ensuring optimal performance. The ORM solution excels in mapping support for complex scenarios, runtime features like change tracking and error processing, and performance optimization tools such as compiled query cache and batch updates. With comprehensive tools, including ORM, visual model designer, data providers, and SQL monitoring, backed by responsive technical support, **Devart LinqConnect Professional** empowers developers to build high-performance, cross-database applications effortlessly.

Key Features of **Devart LinqConnect Professional** :

1. Full compatibility with LINQ to SQL
2. Support for Code-First, Database-First, and Model-First approaches
3. Visual model designer (Entity Developer) for intuitive model design
4. Customizable code generation for efficient code reuse across platforms

ASP.Net .Net Components

5. Compatibility with various .NET frameworks including Full .NET Framework, .NET Core, Silverlight, and Mono
6. ADO.NET interfaces for Silverlight, Metro, and Windows Phone
7. Managed embedded database engine for local SQLite databases on certain platforms
8. Wide data binding support for Windows Forms and WPF applications
9. LinqDataSource component for ASP.NET web applications
10. Integration with Windows Forms, ASP.NET WebForms, WCF RIA Services, Dynamic Data, WPF, and other technologies
11. Direct LINQ support without additional layers for optimized performance
12. Comprehensive mapping support for complex scenarios
13. Smart change tracking and advanced error processing mechanisms
14. Extensibility methods for customizing CRUD operations
15. POCO (Plain Old CLR Object) support
16. Lazy and eager loading with customizable options
17. Performance optimization solutions such as compiled query cache and batch updates
