Tools   Applications

QueueMonitor constantly monitors your MSMQ and queues and can send alerts to you or make automatic corrections whenever there is a problem.

These issues could delay the processing of messages within your application or result in the loss of information!

QueueMonitor maintains a watchful eye over your MSMQ and queues and sends alerts or automated fixes when something goes wrong.

Benefits of MSMQ monitoring

- Find out as quickly when something isn't right on your MSMQ.
- Automated solutions can resolve specific issues without the intervention of an administrator.
- Heartbeat checks could also include your application to monitor.
- QueueMonitor isn't a general monitoring tool with a few simple MSMQ tests added later. It was explicitly designed to be used for MSMQ monitoring. It can detect and deal with queueing-specific issues such as poison messages, dead letters messages, etc.
- We are monitoring multiple machines through a single administrator interface.

QueueMonitor Professional lets you instantly process messages and integrate multiple systems externally using Files, HTTP, SQL database, and FTP without any code.

- The process messages without writing any code.
- Conditional processing is based on the message content.
- Regular backups.
- Learn to parse JSON and XML messages to get critical business information.
- Modify messages.
- Operation based on macros.
- Transfer messages to other queues.

- Integrated integrations that are built-in, without any programming required on your part.
- Connect SQL Server with MSMQ simultaneously.
- You are watching for integrations based on files.
- I am sending files to an FTP server or calling HTTP requests.
- Integration with Command Line applications.
