LowLight Pack For DJI Mavic Pro & Neat Video:

The Lowlight Profiles for DJI Mavic Pro provide advanced tools for shooting in low light conditions, including free De-Flicker presets for ISO 100 to reduce flickering.

Optimized for up to ISO 3200, these profiles de-noise and de-flicker footage, enabling high-quality captures in challenging lighting. Developed with Neat Video, the pack includes noise profiles for 4K and 2.7K resolutions, along with a LUT to correct blue shifts at higher ISOs (1600 and 3200), making it ideal for cinematic low-light scenes.
