ResizeKit2 for Delphi 7-12 Athens

2024-12-18 23:01:31

for Delphi is a versatile tool designed to effortlessly adjust the size of controls and fonts on forms as the form dimensions change. With this tool, developers can create applications that are screen resolution independent or adapt seamlessly to user-initiated size changes, all without the need for extensive code modifications. By simply placing the **ResizeKit2** control on the form at design time, developers can immediately enhance their applications' responsiveness to varying screen sizes.

This tool is adept at supporting Delphi environments, providing a lightweight and efficient VCL component for seamless integration into Delphi applications. It offers unified. EXE distribution ensures applications can be distributed easily in a single unit. The **ResizeKit2** for Delphi simplifies the process of resizing controls, even for third-party controls, eliminating the need for additional code. With customizable properties and an ExitResize event, developers can tailor the resizing process to suit their application requirements.

Furthermore, the **ResizeKit2** for Delphi includes features such as specifying maximum and minimum form dimensions, initial form location, and excluding certain controls or fonts from resizing. With a runtime royalty-free license, developers can distribute their applications without limitations, making it an ideal solution for creating responsive and adaptable Delphi applications.

Key Features of **ResizeKit2** :

1. Automatically resizes all controls and fonts on the form.
2. Simply place the Resize Control on the form. No need to redesign or add additional code.
3. Create applications that support full-screen resolution.
