The collection is filled with vibrant summer tones that I've learned over the years of being a professional photographer for swimwear. These are my first designs and they concentrate on truly enhancing bronzed skin tones while making those vivid colors in the sky and the ocean.

We recommend that you experiment with the settings in the LR program to give your photo the perfect appearance! Explore the effects of the white balance and the exposure to fine-tune and perfect your final photo.

This pack can only be used for Adobe Lightroom.

What is Beach Bronze - Photography Presets?

Beach Bronze - Photography Presets are a collection of pre-configured settings within photo editing software, designed specifically to enhance beach and seaside photographs. These presets typically include adjustments to color tones, contrast, saturation, and other parameters to evoke a warm, sun-kissed aesthetic commonly associated with beach scenes. By applying Beach Bronze presets to their images, photographers can quickly achieve a desired look without the need for extensive manual editing, thereby saving time and effort in post-processing. These presets are particularly popular among photographers who specialize in capturing coastal landscapes, vacation snapshots, or beach-themed imagery.
