Perfinity dotNET Runtime Analyzer v9.0.21

2026-04-08 09:18:59

Perfinity dotNET Runtime Analyzer is a powerful .NET profiler, designed to debug and analyze performance issues within applications. Its line-level sampling profiler enables precise pinpointing of performance bottlenecks, even within native code. The tool supports event tracing, capturing file I/O and network activity, and providing valuable insights correlated with the timeline. Users can also add data context information to investigate app internals efficiently.

With an integrated .NET memory profiler, empowers users to identify memory and resource leaks effectively. Its fast allocation stack recording and minimal overhead make it stand out from traditional .NET memory profilers. The tool offers comprehensive memory issue resolution, including memory overview, tracking of issues from native code, and GDI resource tracking.

Furthermore, the application event tracker captures system and application event topics, providing timestamps and thread stack information. It offers network and file I/O activity tracing, startup performance optimization, and threading usage analysis. **Perfinity dotNET Runtime Analyzer** is an indispensable tool for optimizing .NET application performance and ensuring smooth operation.

Key Features of **Perfinity dotNET Runtime Analyzer** :

1. Powerful .NET Profiler for debugging and analyzing performance issues
2. Line-level sampling profiler for pinpointing performance bottlenecks, including native code analysis
3. Event tracing support for capturing file I/O activity, network activity, and debug events
4. Memory profiler to identify memory and resource leaks efficiently, with minimal overhead
5. Memory overview, tracking of issues from native code, and GDI resource tracking
6. Application event tracker for capturing system and application event topics with timestamps and thread stack information.
7. Network activity tracing, including WCF calls, database queries, and web access

所有软件资源 100%安全 已检测 无病毒 无篡改

Applications Tools

8. File I/O activity tracing, including .NET Remoting/WCF calls and read/write operations
9. Startup-performance optimizer for analyzing root causes of JIT compilations and module relocations
10. Concurrency analyzer for pinpointing threading usage, including threading events with trigger stacks and lock usage.
