JSON Wizard v2.6 for macOS

2025-10-11 02:56:22

JSON Wizard can be the ideal software for those who want to browse and modify the contents of your JSON files. Maybe you'd like to import files in XML/YAML/PLIST/CSV formats, and you wish to export all of those formats, too. JSON Wizard allows for easy visual editing and direct access to source code using live syntax verification.

JSON Wizard is a straightforward OS X application designed to aid you in in using JSON files more efficiently.

The program allows users to open files or load content from an online source and allows them to edit the information.

It is possible to save the project locally in JSON files. JSON file; however, you can export the code in different formats, including XML, YAML, or Property List files.

JSON Wizard can directly open any JSON file or utilize JSON Wizard's included HTTP loader to access the information. It automatically detects and displays all of the nodes. However, you can also utilize the search tool to locate particular entries more quicker.

It is worth noting that JSON Wizard offers support for HTTP requests. It allows you to send GET and POST calls and obtain JSON data straight through the application.

After the editing process has been completed, JSON Wizard can apply an algorithm automatically designed to beautify the source code. It is then time to save your information in a JSON file or the XML, YAML, or Property List document.

Within the JSON Wizard main window, you can also see JSON Wizard's source code and make your adjustments. The built-in syntax checking tool ensures all is correct and provides suggestions.

JSON Wizard is an organized environment to view JSON files that allows editing and converting.

However, during our testing, the application ceased to respond occasionally but without crashing. If you experience similar issues, start JSON Wizard, and everything will return to normal.

JSON Wizard Features:

- Import pure JSON, XML, property lists (XML or binary), YAML, and even CSV
- Edit and view JSON (via the Source-code or the Data-tree view) and observe changes live
- Advanced live syntax checking/linter, with error checking and live notifications
- Source beautifier
- Powerful search feature (to browse through all tree nodes)
- Search-by-path feature (to access specific nodes)
- Export/save to JSON, XML, YAML, property list (XML-based or binary)
- Live HTTP request tool (GET/POST + with additional headers support)
