Acousticsamples WoodBoxes for UVI Falcon: WoodBoxes presents a compilation featuring two distinctive Cajon libraries: WoodBox, showcasing a regular-sized Cajon, and TheBox, highlighting a Bass Cajon.

WoodBox has been meticulously recorded using two microphone positions – a stereo pair positioned in front of the Cajon and another facing the back. Careful attention has been given to trimming all samples, ensuring precise phase alignment.

TheBox, exclusively featuring a Bass Cajon, was recorded using a single microphone position, capturing every nuanced detail essential for an authentic and realistic sound library.

WoodBox Interface:

- Mix between the two microphone positions for a customizable sound.
- Explore Mapping Presets, allowing you to choose between the default setting or create your own.
- Utilize Midi Learn for quick remapping of any element to a desired key by following a simple sequence of steps.
- Adjust Sensitivity to set the minimum volume for velocity 1, granting you control over a wide range of dynamics.

TheBox Interface:

- Choose from default Mapping Presets or create your own for personalized control.
- Use Midi Learn to swiftly remap any element to a desired key with a straightforward process.
- Fine-tune Sensitivity to establish the minimum volume for velocity 1, providing access to a full spectrum of dynamics.
- WoodBoxes offers an intuitive interface with customizable options for both libraries, ensuring an authentic and dynamic Cajon experience for your music production.
