FolderMill v5.6 (11 Feb 2026) for Win

2026-04-09 22:02:33

Server-side FolderMill watches Hot Folders and transforms or prints incoming files on a specified printer. It processes incoming documents on a corporate server, workstation, or desktop PC according to rules.

End users find document processing simple. Copying an original document into the Source. Then processing begins automatically. Converted files display in the output folder or the printer tray.

PC users don't need to install any software or print drivers with FolderMill. Simply copy and drop a file into the Hot Folder to convert or print it. Using FolderMill doesn't require a GUI.

Features of FolderMill:

- Automatic file processing using Hot Folders
- Batch document conversion to PDF, JPG, PNG, TIFF, and more
- Automated printing to local, network, or virtual printers
- Support for 70+ file formats, including Office and image files
- Advanced workflow rules with filters (filename, content, pages, etc.)
- Multiple actions per folder (convert, print, watermark, rename, upload)
- Email integration for automatic processing and printing
- Server-based processing with no need for user interaction
- Real-time monitoring and background operation
- Easy integration into existing document management systems
