YuNetsurf v4.2.0 (16 Sep 2021) for Delphi 6-11 Alexandria

2026-09-28 22:46:56

YuNetSurf HTML5 parser and tree builder with CSS3 tokenizer, parser, and selection engine.

- Parse HTML, good and bad.
- HTML5 tokeniser with SAX-style events.
- Flexible tree builder API for custom DOM implementations.
- Readily provided HTML5 parser classes convert HTML documents into DOM trees:
  - Simple DOM tree: Fast and efficient.
  - LibXml2 tree: Fully compatible with LibXml2 functions, including XPATH and LibXslt transformation.
  - XDOM tree: Feasibility study limited by XDOM restrictions.
- Fast, efficient, and low memory usage.

- Parse CSS, good and bad.
- Apply CSS rules to DOM nodes:
  - CSS2 and CSS3 selectors.
  - Handle most CSS2 as well as some CSS3 properties.
- Selector engines readily provided for
  - Simple DOM tree.
  - LibXml2 tree.
- Flexible selection API to apply CSS to custom DOM implementations.
- Fast, efficient, and low memory usage.

- Extract information from HTML documents:
  - Locate HTML elements based on their tag, attribute, or CSS properties.
  - Extract values of attributes from elements.
  - Find the n-th sibling or child element parsed data.
- Cleanup, change, or extend HTML documents:
  - Add, change, or remove attributes of elements.
  - Manipulate the inner content of elements.
  - Wrap element content inside new elements.
- Use CSS to detect hidden, highlighted, or invisible HTML fragments.
- Apply custom CSS as an HTML element filter or locator.
- Download HTML documents with linked CSSURL resources.
