Eremex Avalonia Controls v1.2.92 (16 Oct 2025)

2026-04-08 11:46:50

The **Eremex Avalonia Controls** Library is a comprehensive toolkit that helps you create contemporary, professional, and aesthetically refined applications within the Avalonia UI framework. It also comes with superior data controls, easy navigation tools, high-quality charts, and even 3D rendering —all of which help save development time and give your app a neat, high-quality appearance.

To work with data, the **Eremex Avalonia Controls** provides Data Grids and Tree Lists that can run as fast as possible, Property Grids, and customization of ListViews. It is easy to sort, filter, edit, group, and validate data and is therefore best suited to dashboards, business applications, and engineering tools. Navigation is equally robust, with a complete Ribbon UI, customizable toolbars, and an entire docking system, which can replicate Visual Studio-style layouts.

Another thing that developers receive is rich charting components, a customizable heatmap control, and a complete 3D model viewer with Vulkan support. **Eremex Avalonia Controls** provides all the features you need to build slick, interactive, feature-rich cross-platform applications, in combination with a broad set of editors, utility controls, and a built-in light/dark theme.

Key Features of **Eremex Avalonia Controls**:

1. **Data Grid** – Fast table control with sorting, grouping, filtering, editing, and validation.
2. **Tree List / Tree View** – Displays hierarchical data with multi-selection, filtering, and drag-and-drop.
3. **Property Grid** – Automatically shows and edits object properties with categories, tabs, and search.
4. **List View** – Customizable item list with grouping, filtering, and stack/wrap layouts.
5. **Ribbon UI** – Office-style command bar with adaptive layout, galleries, and Quick Access Toolbar.
6. **Toolbars & Menus** – Customizable toolbars with drag-and-drop, hotkeys, and in-place editing.
7. **Docking UI** – Visual Studio-like docking system with panels, tabs, floating windows, and layout saving.
8. **Chart Controls** – Interactive charts supporting many series types, multiple axes, zooming, and real-time data.
9. **Heatmap** – 2D color-based data visualization with zooming and export options.
10. **Graphics3D Control** – Renders 3D models with PBR materials, camera controls, and Vulkan acceleration.
11. **Data Editors** – Ready-to-use editors for text, numbers, dates, colors, and more.
12. **Utility Controls** – Useful UI components including tabs, split containers, calendars, dialogs, and progress indicators.
13. **DeltaDesign Theme** – Built-in light and dark themes for a modern application appearance.
