

Clever Database Comparer VCL v8.1.931.0 (22 Jan 2024) for Delphi 7-12 Athens Full Source

2025-09-19 00:55:22

Clever Database Comparer VCL is a comprehensive set of Delphi VCL components for Borland Delphi/C++Builder, streamlining the comparison and synchronization of SQL database objects and records across popular databases. With over 40 refined components, it facilitates tasks such as connecting to databases, extracting structures, generating updated SQL scripts, and synchronizing database structures efficiently. The library supports comprehensive comparison of SQL DDL scripts, data synchronization, and various database objects like stored procedures and triggers.

Clever Database Comparer VCL enables metadata extraction, allowing developers to extract and save the database structure to a file. It offers broad compatibility with popular databases, including Firebird, Interbase, MySQL, MSSQL, Oracle, Sybase, and PostgreSQL. Supporting connection libraries like FireDAC, ADO, IBX, and third-party options such as UniDAC and IBOjects, it accommodates various connectivity needs, including older methods like BDE or FIB. is a valuable tool for developers working on database-related projects, providing efficient and reliable solutions for comparison and synchronization tasks.

Key Features of Clever Database Comparer VCL :

1. Compare and synchronize SQL database objects and table records
2. View differences between databases and generate updated SQL scripts
3. Support for connecting to databases and extracting database structures
4. Comparison of two database structures and updating target structures
5. Comparison of SQL DDL scripts and synchronization with databases

标签

- VCL
- Delphi
- Components

- 6. Data comparison and synchronization between tables, databases, and different database types
- 7. Support for popular databases such as Firebird, Interbase, MS SQL, Oracle, MySQL, Sybase, PostgreSQL, etc.
- 8. Comparison and synchronization of stored procedures, triggers, and function scripts
- 9. In-depth comparison of tables, constraints, indices, generators, and other database objects
- 10. Extraction of database structure (metadata) to a file
- 11. Compatibility with various connection libraries, including FireDAC, ADO, IBX, and third-party options like UniDAC and IBOjects
- 12. Flexibility in using outdated connection methods like BDE or FIB
