Autodesk - ReCap Pro:

Autodesk ReCap Pro is an easy-to-use capture reality software and 3D scanning package tailored to the needs of designers and engineers as it enables the construction of 3D models from photos and scans. It allows users to turn real-world assets into digital formats. It captures point clouds or meshes that represent the existing condition and as-built assets, and it allows seamless integration between team members, enhancing collaboration. Additionally, its cloud-based workflows allow for better modern management of digital assets by ensuring optimal file management, feature extraction, and updates.

Some great features of Autodesk - ReCap Pro:

- **Scan to Mesh:** This feature converts point clouds into a formatted mesh model, improving the process by enhancing stratification.
- **Revit Plug-in:** The new plug-in allows complex mesh objects to be added as Revit Families so they can be used in the project without hindering the flow of work.
- **ReCap Viewer 3D Feature Extraction:** Use the ReCap Cloud Viewer to extract features from point cloud data for ADA ramps and driveways, enhancing accuracy and detail of the project.
- **Linear Feature Extraction:** With the ReCap Cloud Viewer, large point cloud datasets can be segmented into geometries of interest which are later extracted to facilitate proper project planning and execution.
- **Autodesk Docs Point Cloud Viewer:** Enhance project collaboration and overall management by annotating and viewing point clouds and RealViews in Autodesk Docs.
- **Cloud Project Management:** ReCap Pro projects can be published and managed in Autodesk Docs and Autodesk Construction Cloud for easy access and sharing across platforms. Projects can be viewed, annotated, and shared through Autodesk Drive, Autodesk Docs, and Autodesk Construction Cloud.
