Coolmuster PDF Locker is an easy-to-use software that assists you in safeguarding your PDF files with passwords so that the right individuals can access or utilize their content. You are able to add a user password to regulate the viewing of the file and an owner password to prevent the editing, copying, and printing of your content by others without asking permission. It is applicable for storing personal, business, or confidential documents.

The software provides you with three levels of security to select, depending on the degree of protection you wish to have. It also lets you determine what exactly others can do with your PDF, such as print it in low or high quality, copy text, fill in forms, or make changes. That is, you retain full control of your document even upon sharing it.

Coolmuster PDF Locker is made to make everyone feel free to use, with a smart interface, and also drag and drop. You are able to lock several PDFs simultaneously with a single password, and it does not take long, regardless of the size of the files. An app that is designed to be a standalone application, with no advertisements, allows one to protect their files in the shortest time possible.
