CGDevTools v4.1.0.329 (IWCGjQuery Suite + IWCGjQuery Mobile) for D2009-D11 Alexandria Full Source

2026-04-23 09:46:54

The CGDevTools is basically a jQuery that is based on the components that are available for use in the Embarcadero Rad Studio. If the user is looking for a speedy and quick way to speed up the process and the performance of the Intraweb app and later adds an agent of the Intuitive. This is a great choice for users. The components are being used as a bridge between the JavaScript, jQuery, and the plugins of the Intraweb.

IWCGjQuery Bundle Controls:

The Google Place Autocomplete:

Before the process of using the Places library right in the Maps of the JavaScript API, the first thing that the user ensures is the Places API that is enabled in the console of the Google Cloud Platform. In the same project, the user can set up the Maps of the JavaScript API. For the summer we can say that the API offers two types of autocomplete widgets through which the user can add the search box and the Autocomplete classes respectively. It should be added that the user can use the autocomplete service class in order to retrieve the autocomplete result programmatically. The user can create an autocomplete service object for the process of retrieving the predictions in a programmatic Manor to retrieve the matching places all the matching places along with the suggested search items. Every object of the prediction contains a text with the prediction and as a piece of reference information along with the details of the process as to how the result matches the input of the user. The utilization of the autocomplete performance which is a text-based geographic hunt can be used by the return of the areas like the companies, addresses, and the points wherever the user needs and the user types.

JQVisualCaptcha:

The use of the components in the Google Places API Web services can be used by the users for the autocomplete functionality providing text-based geographic searches and by the returning process, the places such as the business, addresses and the point of the interest as the type of the user and the choice of him. There can be a configuration solution captcha and it focuses on the accessibility as well as the simplicity whilst keeping in mind and focusing on the security of it.
