If you are looking to keep your Windows drivers updated but aren't willing to search on every individual website, **DriverMax Pro** is the right tool for you. It will scan your computer, identify outdated or missing drivers, and assist you in downloading the latest appropriate drivers for your hardware. This can save time, particularly after installing Windows or when attempting to resolve issues with the device.

They say it is the software that will help to make the PC more stable and faster with the help of filtering and eliminating the problems that may be caused by old, broken, or incompatible drivers. Outdated drivers can cause a computer to freeze, crash, or perform slowly, or devices may not work correctly, as drivers help Windows communicate with hardware devices. DriverMax Pro can be used for millions of devices and will also update essential software, like DirectX, OpenAL, C++ Runtime, Oracle Java, and a lot more.

DriverMax Pro also provides safety in the process of updating. It can back up your current drivers, make a system restore point, and allow you to revert back to those changes if you run into trouble. You can also export your working drivers to a folder or ZIP file to facilitate restore or reuse after a new installation of Windows.
