FastReport.Mono v2023.1.7 (27 Dec 2022)

2025-03-18 01:38:51

The Fast Report is the process of reporting, recording, and even creating the library. It can be used along with Windows as well as Linux.

Report Elements

It is a band-oriented record generator. There are about 13 types of bands that are accessible and a few of them are Report, Page Header, Footer, Column Header, Report Summary, Group Header, Child, Overlay, and so on.

Data Processing

- It can function with the information from the resources of ADO.NET and it can filter as well as sort the rows in the data to utilize the data columns that are used for researching and connection. Everything, in this case, can be accomplished with just a few mouse clicks.
- It has direct links to many databases.
- It can acquire information from a respective company's objects which are mainly IEnumerable type.
- The reports in this case can contain data resources and the user cannot utilize the application which is defined at the dataset but he can connect to any database by his choice and then utilize the table as well as inquiries straight within the accounts.
- It also includes a scrapped engine that can support languages such as .NET and the C# and the VB.NET.
- It can execute complex data management and even handle the interaction of the dialogs and a lot more.
- The report in this case can include conversations that mainly prompt the parameters until and unless the report is running.
- It is working with the query builder which in this case is very visual and the user does not need to know much about the language of SQL to be able to make queries that are complicated and involve data tables.

Preview, Print, Export

- It is a very handy MS Word style and can have Windows preview.
- It can search the text in a ready report.
- It can alter the prepared statement as well as web pages.
- Navigation from the preview windows is very much possible for the users.
- The outline will be presented in the preview windows whenever the user clicks on the outline thing.
- It has interactive reports and the user can determine when to click on the item that is located in the window of preview and can even take an action. For instance, the user can construct and preview another record that has detained information about the product which is being clicked.
- It has a range of attributes for printing and it has a large page along with several smaller ones.
- Adding watermarks is possible by the user for a report that has a nominal attempt.
- Exporting the filters permits the user to export his account into other supported formats such as PDF, RTF, XLS, TIFF, TXT, CVS, XML, HTML, JPG, BMP, and finally the Open document.
- The user can send emails with the use of a single mouse click.

The Fast Report Mono can be used with Linux, windows as well as Mac OS. Along with the Fast Report Mono, the user can produce applications that are mainly independent and Reports such as .NET and Mono. We can put it differently the Fast Report Mono can be utilized by the user as a reporting instrument.

- Can connect to virtually any database or even used any of its tables and can even create inquiries.
- It allows the adding of dialogs in the forms for a report to prompt for the parameters before running the report by the user.
