HitmanPro.Alert v3.22.1.2059 Multilingual Pre-Activated

2026-05-18 10:00:14

HitmanPro.Alert is security software designed to disinfect a compromised PC and then protect it further. Running in the background is **HitmanPro.Alert** supplements existing protection for your computer with additional defenses against hacking, ransomware, keyloggers, exploits, and similar online attacks.

It has all the features of HitmanPro, so the tool will find and remove malware from your PC as well as provide it with increased protection for day-to-day use. This protection is particularly helpful in securing popular applications like Microsoft Office and Word as well as your web browser, which often provides attack vectors for intrusion into your system.

Its most significant feature is its protection against ransomware. **HitmanPro.Alert** monitors file encryption, quarantines any threat, and then seeks to restore files. Protection for private information includes the thwarting of keyloggers, and you are notified if any application attempts to activate your webcam.

Key Features of **HitmanPro.Alert** :

1. **Malware Removal** — Finds and removes harmful software from your computer.
2. **Always-On Protection** — Works quietly in the background to help keep your PC protected.
3. **Ransomware Defense** — Detects suspicious encryption activity and stops ransomware before it damages your files.
4. **File Recovery Support** — Creates backups during ransomware attacks so affected files can be restored.
5. **Exploit Protection** — Adds extra security around vulnerable programs like Office apps and browsers.
6. **HitmanPro Features Included** — Includes the malware-cleaning capabilities of HitmanPro.
7. **Keystroke Encryption** — Helps protect passwords, credit card numbers, and other typed information from keyloggers.
8. **Browser Security** — Strengthens your browser against hacking attempts and online exploits.
9. **Webcam Alerts** — Notifies you when any program activates your webcam.
10. **Malware Deception** — Makes your system look like a security research environment, which can cause some malware to shut itself down.
