#### What is Moonstruck Lightroom Presets?

Lightroom presets are pre-defined settings in Adobe Lightroom, a popular photo editing software, that allow users to apply a specific look or style to their photos with a single click.

Presets are often created by photographers or editing professionals and can be used to streamline the editing process or achieve a consistent aesthetic across a series of photos. The term "Moonstruck" in this context might indicate a particular style or mood associated with the presets, but without specific details, I can't provide information about the characteristics of these presets.
