### ROBOTICS SOUND DESIGN TOOLKIT

This collection of sounds contains performances and recordings of the ABB industrial robotic. Robot sounds such as these are ideal for the design of pneumatic doors, sci-fi weapons or robotic engines, futuristic vehicles, spaceships, hydraulics, and many more.

## Gfx plugin details of Just Sound Effects Industrial Robot WAV-ViP

The product is in the **SOUND EFFECTS** category, for more information about this post you can click on the home page link in the sidebar.

### Recordings of a REAL ROBOT

Industrial robots are able to perform a variety of tasks and generate, thanks to their movable capabilities many interesting sounds. To capture the variety of sounds that they can create the company we collaborated with designed and programmed the machine specifically for recording our sessions.

### The Recording Process

The robot's six axes as well as the soundproofing room made for the perfect recording foundation. We recorded all six axes in three different speeds from various angles in stereo and mono, providing you with a basic collection of sounds that you can use to create all kinds of servo and robot sound effects. Additionally, you will receive more specific sounds that are a result of various work processes, which lead to pitch-modulated motions like speed as well as slow speed. Along with the recordings of robots, you'll also get a variety of clicking sounds and manipulations to complete the sound experience.
