

AidAim Accuracer v17.00 MultiUser for D10.4 Sydney Pre-Activated

2026-09-08 01:12:10

Accuracer Database System, a Windows / Linux cross-platform BDE alternative embedded Delphi Database with SQL support for software engineers working in the Embarcadero RAD Studio and Borland (CodeGear), Delphi / C++Builder, and Borland Kylix.

Accuracer, a database type, is the SQL single-file integrated into. This is an excellent alternative to CID default Delphi. The entire information of this database is saved in a single, portable file. Accuracer is easy to use but requires special arrangements. It can be used by several simple apps that only access the database. Clients and files cannot implement the village. Accuracer

It provides full Unicode support. It will use the SQL stored functions of one of the procedures. Send help to get the pings of the complex via jQuery nested in the database. Support the product forecast is a sensitive application that must be transaction-safe. The necessary could be used to perform transactions at any stage of rollback. The fields that contain the desired index can be used to speed up access to the data. (B+ Tree is used for the index of tree optimization.

Accuracer is the next generation in our Delphi database products line, which began more than 10 years ago using EasyTable, a highly respected and well-respected product. The Accuracer Database System product line includes several independent DBMS software products used with the databases in Accuracer format.

- Accuracer VCL - general package for software development in Delphi / C++Builder;
- Accuracer CLX - general package for Kylix;
- Accuracer Database Server - server application that is the part of Accuracer VCL (CS Std and CS Pro editions);
- Accuracer Utilities - package includes utilities with full source code;
- Accuracer ODBC Driver - ODBC version for Windows;
- Accuracer Bold DB Adapter - support for Borland Bold for Delphi, a useful tool for data import/export;
- Accuracer Data Provider for Fast Query Builder
- Accuracer Database Connection for Easy Query
- Accuracer Data Provider for Active Query Builder

Accuracer VCL/CLX includes a new original BDE alternative database engine that supports almost all TTable, TQuery, TDatabase, and TSession. TBatchMove functions and provides some special ones to give you high functionality and ease of use.

Accuracer is currently available for the Borland Delphi, C++Builder, and Kylix development environments in Single-User (SU), Multi-User (MU), and Client/Server (CS) versions.

AidAim Accuracer Great Features:

- Client/server database engine with a server component and custom messages
- Easy-to-use multi-user (file-server) database engine
- Multi-thread access
- Storing all tables inside the single database file
- Embedded database: no BDE, no DLLs
- SQL'92 DML & DDL enhanced support with advanced statements
- Correlated subqueries support in SELECT, UPDATE, and DELETE SQL statements
- SQL stored procedures and functions support
- Case-insensitive search
- Referential Integrity support (SQL'99 compliance)
- 100% Unicode support - SQL, filters, database objects names

Components

VCL

Delphi

- Easy-to-use changes detection and writes failures detection
- Fully compatible with standard DB-aware controls
- IProvider Support (ClientDataset)
- Small footprint and low memory usage
- In-Memory tables support for the fastest data access
- Varchar and BLOB field types with optional data compression
- Strong database encryption with a wide variety of algorithms and modes
- Transactions support with READ COMMITTED isolation level
- BatchMove component
- Reverse engineering (tables to SQL script export)
- Backup and Restore support
- Triggers - database and server events
- Full Views support
- The capability of database embedding inside the executable file
- ODBC Driver available
- Windows / Linux cross-platform database engine
- No royalties
- Native Delphi database, full source code available
- Ideal as BDE replacement - does not require any .dll and includes data transfer utility.
