

Devart SecureBridge v12.0.0 Pro (06 Oct 2025) for Delphi 13 Alexandria Full Source

2026-07-04 20:11:24

SecureBridge is basically considered to be a package of the server as well as a client element for the web socket, FTPS, SSH, HTTP, HTTPS and even SSL available for the users and developers. The network security option is not difficult in order to be installed by the user, and to be used and it is sufficient in order to put different element on the type and to define the server address as well as the user credentials in order to setup secure connection for the users. SecureBridge has the capability to protect any traffic of the TCP with the use of the protocols such as SSH as well as SSL along with cryptographic message syntax and can offer the users and authentication for the client as well as the host. It is an element which can be utilized along the data access, as well as the component, in order to stop the intersection of the data or even the alteration within the network which is untrusted. In order to be able to guarantee the security of the data in a secure network it is vital in order to look after the protection of the data as well as the ethics of it. Before placing the information in a place which is speculative it requires to be encrypted. Right on the side of opposing the information should be decrypted. The safety of the customer as well as the server security can be implemented with the use of the SecureBridge easily and flexibly by the incorporation of the different elements of the user program. Influence the structure and it will not be including external dependencies and it is possible for the user along with the SecureBridge in order to create a dependent security server as well as a software of the client in order to shield the connection which is between the network that are trusted.

Devart SecureBridge Components Great Features:

It has the following features and attributes that are stated as below such as:

- It has the capability to support the Delphi 6,7 C++ Builder, Embarcadero RAD Studio 2010. XE. XE2. XE3. XE4. Seattle, Berlin, Tokyo, and finally Sydney.
- It has the capability to support for the Lazarus 2.0.10 as well as the Free Pascal 3.2.0 right on the windows, Linux and finally Mac OS.
- It has the capability to support the open-source circuit library for the communication in the internet.
- It is compatible with the Open SSH 3.8 as well as PuTTY.
- It can support the PostgreSQL data access components for its users and developers.
- It provides a robust protection against the other kinds of the cryptographic attacks and has a very high performance.
- It provides the ability for the user in order to work with the system as well as the external certificate storage with the help of the CryptoAPI.
