

Iron Speed Designer v12.2.0.14965

2024-12-29 13:48:21

You can seamlessly connect to an existing database and allow Iron Speed Designer to generate a visually appealing, feature-rich .NET application that offers easy customization. Our professionally crafted layouts are both user-friendly and highly adaptable. You can select the content you wish to include on your pages, and our data entry panels efficiently update multiple tables in a single transaction. You can also edit multiple records in a convenient spreadsheet format. Developing applications for Apple, Android, and other mobile devices has never been more accessible, and they are ready for submission to the App Store and Google Play.

We provide page- and component-level access control, single sign-on, the ability to remember user names and passwords, and a lost password retrieval feature. Your data and URL parameters are encrypted for security. You can even display Google Maps and create location-aware mobile apps that filter and sort records based on their proximity to your location. Additionally, our platform can convert street addresses into latitude and longitude coordinates and offers automatic configuration of charts and graphs to help visualize essential trends.

Iron Speed Designer Great Features:

Professionally-Designed Page Styles

Our professionally designed layouts are intuitive and flexible. Pages are easy to customize, so you can choose what to include.

Efficient data entry panels update multiple tables in a single transaction. You can even edit multiple records in a convenient spreadsheet format.
