2025-01-12 20:23:37

TX Barcode .NET for WPF software consists of features to complete one day as well as 2D barcode control for the software of the WPF.

The features and attributes of the TX Barcode .NET for WPF:

It has the following features and attributes that are stated below such as:

- Common word processing features:** It can support the 1D as well as 2D barcodes for the users and developers. As we know barcodes are being included everywhere as well as invoice delivery notes or even the boarding passes and they are being used to store the data digitally on paper and it can be acquired for further processing with the use of laser-based scanner cameras or even mobiles. Barcode is closing the gap between the business processes as well as the paper oriented world. With the use of the TX Text Control, the user can add a fast as well as an accurate 1D and 2D barcode to the user application which is .NET. The user can integrate barcode into the reports, invoices, as well as mail, merge templates.
- Bullets and numbering list:** TX Text Control .NET for WPF provides the user sends David Lopez with comprehensive support for the bullet as well as the number to list the typical application include the creation of the documents that contain meeting minutes, reading of the list or even The to Do List. Every conceivable attribute of the numbered list can be defined by the user as well as the type and the shape of the bullet directly from the code of the program. Numbered list, as well as bullets, can contain any of the TX Text Control .NET for WPF for a lot of formatting options.
- Clipboard operation:** TX Text Control .NET for WPF can provide the users and the programmers an easy way to change the default behavior for the process of pasting data from the clipboard. It can return an array of formats and can be stored in the clipboard and pasted into the TX Text Control .NET for WPF. The users and the developers in this case can easily make clipboard operations that are available to the end-user with the menu points and directly from the shortcut of the keyboard.
- Image formats:** The image file format is dependent upon the application as well as the type of data that has to be saved by the user and the developer. The format of GIF is the most common one for graphic images on the internet and it is a highly compressed format that is used in order to display 2-dimensional images. It is suited to the containing image in a large area of the same color. PNG on the other hand is a file format standard that has been approved by the World Wide Web and it is patent and license-free.
- Page Columns:** The columns are considered to be very useful for the process of word processing and the feature which is most commonly being used for the information effectively. It can make it faster and easier for the user and the developer to comprehend. A shortcut keyboard combination is available for the users and the developers along which the end-user can use to force the text into the column. This process is achieved by the insertion of the break character by the user. A different number of columns can be inserted into a single document and the number of columns in this case can be specified at the page level or even at the document itself. It permits the user on the developer a different number of columns on either of the pages if required.
- Spell checking:** With the use of the TX Spell .NET the user can add extremely fast as well as highly reliable and accurate spell checking process to the applications that are TX Text Control .NET for WPF based. Whenever the words are not in the selected or the dictionary which belongs to the user it is underlined with the use of the red line and the option of spell checking permits the user and developer to check the spelling as soon as the user types word by word and even when a user tries to copy or paste.
- Zooming:** The angular, in this case, can zoom in and zoom out of the document in steps and with the zoom factor from 10% to almost 400%. The factor of the zoom can be automatically set to view the entire page or even the width of the page.
