Do you enjoy creating seamless repeats but your Photoshop process takes forever and makes you snarl? Are you fed up with guessing about, calculating, and creating the repeat manually?

Do not worry about it I've come up with a useful solution that cuts your workload in half, and lets you fully have fun creating patterns using Photoshop without having to do it manually. It's finally here!

The **Seamless Pattern FIX** action Toolkit is designed for **the PHOTOSHOP!**

The ability to be able to **design more patterns** and complicated repeats dramatically **quicker and, more importantly, repeat objects with just one click!**

The SPF toolkit was created to work with any size or resolution of document you prefer, which means there's no need to calculate or guess. Simply create a new document, put your artwork around the corners or edges and click on any of the Seamless Pattern Fix actions, and then you'll have your design repeated in a seamless fashion!

There is no calculation, no math, and no Offset tool, and no cutting artwork or changing the position manually. This little toolkit will perform the heavy lifting for you and let you concentrate on what matters most the design, flow of patterns, and making a myriad of repeating patterns. This is not counting the time-consuming, tedious actions you'd have to perform prior to.

1. Seamless Pattern Fix set that contains the following steps:

COPY to Edge - copy and move one selected layer, group, or multiple selected layers on one edge. It will then copy it on the opposite edge in order to preserve that seamless look.

MOVE to Edge Moves an element (group several layers or one layer) located along one side to its opposite edge. Make note that it is only a move; it doesn't duplicate your selection.

CORNER Fix It's the action(s) I am most fond of! Corner fix copies one or more selected layers or groups (of objects, layers, or artwork) which are on two edges simultaneously and then repeats them along the remaining edges, preserving an uninterrupted repeat.

Preview Repeat Lets you look at your pattern at any time. There is no need to design patterns or fills, copy the tiles, paste them and arrange them manually. Simply click the button and it'll copy and paste the artwork (including background, if you do not cover it) and paste it onto another document, where you can preview the seamless pattern. It can be either 25 or 50 percent, based on the operation you execute.
