

Galaktikasoftware Ranet Analytics v5.5.1623.0

2024-12-18 23:02:45

Ranet Analytics can be used to create applications for visualization, data analysis, planning, and modeling.

- Easy Interactive Dashboards
- Ad-hoc reports featuring animated graphics
- Based on the Writeback, modeling in real-time

Ranet Analytics provides services to your workers with Business Intelligence tools that allow them to make informed decisions. The dashboard's main purpose is to present information visually about certain aspects of your business. It also provides the resources necessary to perform interactive analyses.

Galaktikasoftware Ranet Analytics: Great Features

Allows you to create interactive dashboards that are functional and ergonomic for the analysis of organizational activity indicators. You can visualize business indicators with maximum clarity using the embedded designer and many interactive visual elements.

No technical skills are required to create interactive dashboards. Anyone who knows how to use Microsoft Excel summary tables can quickly create a report that includes a summary table, a diagram, and an interactive indicator analysis.

Ranet Analytics is a web-browser-friendly application. You can zoom in and out of the application, connect to new users, and publish dashboards on the Internet.

You can play with dashboards from your mobile. Ranet Analytics allows you to publish dashboards that can be viewed on smartphones, tablets PC and mobile devices. You don't have to use Android or iOS platforms. Dashboard publication in HTML5 format is possible so that you can display them on all mobile devices.

Ranet Analytics offers partners the ability to embed Ranet Analytics in their solutions and make them their own. It can be used to complete BI tasks, budgeting, and planning effectively. It is data entry forms that support the Writeback function and an interactive summary tableau.

Ranet Analytics offers a variety of graphic elements that can be used to visualize data. Diagrams, graphs, tables, and dials allow you to present information most ergonomically. The embedded Drill Down/Drill Up functions make it easy to search data for real operations.

Ranet Analytics offers a flexible security system that is based on roles. This allows administrators to manage users in a way that takes into account their business-process responsibilities. Administrators can customize the user's access to specific widgets and concrete dashboards.
