Hex-Rays IDA Pro, which stands for Interactive disassembler, is a disassembler for computers and the software that is able to generate assembly language for the users and the developers from the machine code, which is executable in nature. It has unique support for a variety of executive table formats for alternative and different processors and has bill assistance for operating. It can be used as a debugger for the Windows of the PE, Mac OS, and Linux ELF, which is executable. The plugin program for decompiler can compile with the compiler of C/C++ pictures of a leopard at some extra cost. The latest version is known to be commercial, so the earlier ones were less capable versions and are available for download free of cost. The interactive disassembler can analyze the code automatically and also uses the cross-reference between the section of the code as well as the knowledge of the parameters that belong to the API.

The nature of the disassembly is accurate, and it has a great deal of human intervention. It is known to have an interactive functionality that is trying to help as well as improve the disassembly process to users on the developer, and the typical Interactive disassembler or the IDA user can begin with the process of automatically generating the disassembly and then converting the sections from certain codes to data and even the opposite. The IDA disassembler is described to be a very interactive, programmable processor that is posted on Windows, Linux, and even the Mac OS. In this case, the Source Code is offered to the users and developers, and the disassembler, which is the , has the ability and the proper to generate maps for the process of implementation to reveal the instructions that are executed by the processes and the developers at the typical representation. The procedure permits the users and developers that are being supported to become nefarious,

including the spyware as well as malware, to be analyzed by the experts of the software that are present. The language of the assembly is considered to be challenging for the process of reading and, at the same time, making sense. This is one of the reasons why the technique is implemented in order to create certain codes that are reliable for users and developers. Sometimes, it is very much like reverting the program to the code of the source that created it.

The system has a map for this program that can be posted for further investigation. In the process of Investigation of life, things may appear apparent and straightforward. Tools are required in order to help the process of analyzing the analyst. The debugger, which is present at the IDA Pro, can complement evaluation, which is static for the users and developers for a single step with the system being researched, and in this case, the debugger bypasses the obfuscation and the ability to assist the gaining process of the data and make it stronger and the assembler will take the ability to the procedure in the depth.

Key Features of Hex-Rays IDA Pro :

1. The debuggers, in this case, are scriptable.
2. The remote process of debugging tutorial is available for the users and developers.
3. It provides instant debugging.
4. There is no need for the user to wait for the analysis to be over and complete to start the session of debugging.
5. It has a very easy connection to boat the remote as well as the local processes.
6. It has support for the 64-bit system as well as the new connection along with possibilities.
7. It has the ability and the ability to perform the automatic analysis of the code.
8. It is available in the languages of English and Russian.
